Description

**Confirmation:** To test if the acceptance criteria has been met, submit an application with incorrect information (i.e., the student's first name is spelt wrong) and click the "No" button. The application should be wiped clear and the user should be able to refill in the information. Next, submit an application with illegal characters or missing information and click the "Yes" button. The system should return an error and prompt the user to fix it. Next,

4/19/2021Jira

submit an application that's fully completed and correct and click the "Yes" button. The system should display a confirmation message the student has successfully sent their application and there should be a prompt to return to the login screen.

As a user, I want to verify my information so that the school has my correct information. (SCG3-15)

 [SCG3-139] Acceptance Criteria

Sprint:

Description

**Acceptance criteria:** If working properly, the system will display all of the information that the user has entered from the previous story. The user can confirm whether or not the information is correct. If the information is correct, the "Yes" button will display a confirmation message (eg, "the application has been sent") and send an email to the student. If the information is incorrect (there's a typo), the "No" button will send the user back to the beginning of the application. This feature requires that the user has already filled out the application.

As a user, I want to verify my information so that the school has my correct information. (SCG3-15)

Sprint:

Description

**FeVER:** The user begins on the (completed) page that has the drop down lists "Term applying for" and "Major category". The user clicks the button on the bottom of the screen that says "Verify". The system responds by updating the page to display all of the applicant information that the user has entered. From top to bottom, the system displays the user's first and last name, date of birth, social security number, contact information, the term the user is applying for, and the major category the user has selected. There is a message at the bottom of the screen, "Is the following information correct?", followed by two buttons labeled "Yes" and "No". If the user selects "No", the system takes them back to the beginning of the application page. Else if the student selects "Yes", the system displays a confirmation message, stating "the application has been sent to the school". The system sends a verification email to the student.

As a user, I want to verify my information so that the school has my correct information. (SCG3-15)

Sprint:			

Description

**Confirmation:** To test that the code passes the acceptance criteria, we should test to see if the correct boolean values are returned for the states of each assessment. To test this, check to see if the user has submitted transcripts. If the user has already submitted their transcripts, the corresponding assessment tests should not be available and the system should instead deliver a message indicating that the user's requirements have been fulfilled. If there are no transcripts detected, then the user should be able to take the assessment tests and receive a grade for each. If the user receives a grade, the system will display a message that refers a course for the student to enroll in, such as "Math score: 4 out of 5. Recommended course: Math 30".

As a user, I want to take assessment tests so that I can know which classes I should take first. (SCG3-19)

 [SCG3-135] Acceptance

Description

**Acceptance criteria:** If working properly, the user can select which test they would like to complete (math or writing). If the user selects the button "Math Assessment", they should be taken to the math assessment page. If the user selects "Writing Assessment", they should be taken to the writing assessment page. If the user has already completed the assessments, the button should be replaced with the user's score and the correct class for placement. This feature requires that the user has already applied to the school and their account has been created.

As a user, I want to take assessment tests so that I can know which classes I should take first. (SCG3-19)

Description

Acceptance criteria: If working properly, the user should be able to input and submit all of the required information (with legal characters). This feature can stand alone and it will lead into the next user story for verification.

4/19/2021Jira

Confirmation: The code passes the acceptance criteria if each text box is filled in and completed with legal characters. To test that the code works, the boxes should only contain the letters A-Z and a-z for the names, and digits 0-9 for the social security number and the date of birth. If any of these boxes contain a character other than the ones stated (such as ` , " , # ), then the system should display an error message. Otherwise, the code passes the acceptance criteria and the user moves onto the next feature.

As a user, I want to be able to apply to school so that I can create my student account. (SCG3-8)

Description

FeVER: The user starts at the home screen. The user clicks a button that says "Apply to school". The system responds by displaying the application page where the user inputs their information into the following text boxes: First and last name, date of birth, social security number, contact information (phone, email, address). The user clicks on each of the text boxes and inputs their information accordingly. If any box is left empty, the system leaves a red asterisk next to the box with a note that says "required". If any of the boxes contain illegal characters, the system leaves a message highlighted in red that displays which characters are allowed. The user, after filling in each box, clicks a button at the bottom right side of the page that says "Next". The system updates the page and now displays some drop down lists that are labeled "Term applying for" and "Major category". The user clicks on each of the drop down lists, and enters the correct selection. The user then clicks a button on the bottom of the screen that says "Verify".

Description

The user starts at the home page and should be easily found and identify the class schedule. The user clicks on the class schedule button, the system responds by jumping into the schedule page. On the schedule page, the user can choose to change the search preference by choosing the following options in the form. The schedule page should have the following text boxes for user input the text boxes with a red asterisk are required and text boxes without a red asterisk are optional. The required text box is one search bar with a caption inside it “Subject, course number, title or major” in this search bar user can put course number or title or search by subject. To help the user to narrow the search there are other text boxes that users can use to search by preferred professors, preferred times, preferred classes, or classes with completed prereqs. The user clicks on the search button and a list of classes will be shown.

As a student, I want to check the classes that I've selected so that I will know how many units I'm taking this semester. (SCG3-50)

#### Description

Test before proceeding to the Class Cart code:

- Verify if the user has an account by implementing a simple boolean method. For example, boolean *has\_an\_account* (returns true if a username is found)

Tests to check if Class Cart code works:

- Check if the user is enrolled in class or not by implementing a boolean function like *is\_enrolled* It returns a boolean value if the user is enrolled or not by checking if there is at least one class enrolled.
  - If the user is not enrolled in class yet, the program should display the cart is empty.If
  - the function returns true (meaning there is at least one class enrolled), the units and fee for each class should be displayed.
- The total units and fees of classes enrolled should appear in the screen. There will be a button there to let the user pay fees and provides them options to pay by card or cash.
- There should be a text box for the user input that lets them enter the amount due. Check if the user input paid the amount due by implementing a boolean function like *is\_amount\_fully\_paid* that returns a boolean value if the user input matches the amount due for their classes.

As a student, I want to check the classes that I've selected so that I will know how many units I'm taking this semester. (SCG3-50)

Description

User clicks on the “cart” tab. After the user selects a class, the class will be added to the cart. The user will have the option to continue searching for classes or proceed for payment. The cart will display the list of classes selected by the user along with the total units for those classes. The user will have an option to delete a class from the list by having checkboxes for each class and a button to delete. The cart will display the total amount of fees for the selected classes. When paying for fees, the user will have two available methods for paying: by check and by card. Both transactions will be checked by the system if it will become successful or not.

As a student, I want to look up a professor so that I will have a perspective on how they handle their classes (SCG3-49)

Description

Tests before proceeding to Search Professor code:

- Verify if the user has an account by implementing a simple boolean method. For example, boolean *has\_an\_account* (returns true if a username is found).
- Verify if professors are loaded in the storage by checking the list of professors

Test to check if Search Professor code works:

- There will be a search box for the user input to enter the professor’s first and last name. Check if the user’s input matches one of the professors in the storage by implementing a boolean function like *is\_professor\_found* that returns true if the string input by the user in first AND last name matches the professor’s name. The program should display the professor and their ratings in the screen.

Description

The student must have an account, which is assumingly fulfilled because they have access in the homepage. Professor must be known by the system.

As a student, I want to look up a professor so that I will have a perspective on how they handle their classes (SCG3-49)

#### Description

The user clicks on the "look up a professor" tab. The system will prompt the user to enter the professor's first and last name with a search text box. If the system does not identify user's input, it will display a message to the user that says that professor does not teach in the campus. If the user's input matches any known professor by the system, the system will display that professor along with their rating.

**As a student, I want to see all of the classes that are offered for this semester so that I can pick which schedule/professor fits best in my schedule.** (SCG3-48)

#### Description

Test before proceeding to Search Class code:

- Verify if the user has an account by implementing a simple boolean method. For example, boolean *has\_an\_account* (returns true if a username is found)

Tests to check if Search Class works:

- First, search a class by using the drop-down list. Check if the drop-down list is working properly and all of the subjects are listed. If the user selected a subject, the program must return all of the available classes for that specific subject.

4/19/2021Jira

- If searching a class by professor, there will be a search box for the user input to enter the professor's first and last name. Check if the user's input matches one of the professors in the storage by implementing a boolean function like *is\_professor\_found* that returns true if the string input by the user in first AND last name matches the professor's name. The program should display the classes offered by that professor.

As a student, I want to see all of the classes that are offered for this semester so that I can pick which schedule/professor fits best in my schedule. (SCG3-48)

Description

Once the users click on the managing classes, they will see all their classes that have been added or on the waitlist. Each class of these will have next to it the class name, professor name, class number, class capacity, waiting list number, drop date so it will be easy for the user to see all the information for the class. At the same time, there will be a button to click in front of each class to drop and that will display a confirmation message if the user wants to drop with ( Are you sure you want to drop this class?).

As a user, I want to see the class information so I don't add the wrong class that I want.

Description

When the user clicks on "search for classes" tab in the homepage/dashboard, the system will provide 2 options for the user to search for classes: a drop-down list for subjects along with a text box for course number, and a text box for the professor's last name. The user will pick a subject from the drop-down list; and they will have an option to enter the course number for that subject to make the search narrower. If the user chooses to search a class by looking up a professor, the system will provide a search box for the user to search a professor by their last name. After the user satisfies one of these two options, the system will display all of the classes offered for the semester. The list includes the subject, subject description, meeting time, the professor and their rating, and the units.

As a user, I want to send my transcripts so that I can satisfy parts of my degree. (SCG3-18)

Description

The user begins at the home screen. The user clicks on the button that is labeled "Upload Transcripts". The system responds by displaying a page that provides options for submitting the user's official transcripts. The user clicks on a button labeled "Upload Files". The system responds by opening up the computer's file explorer. The user selects the correct directory where their official transcripts are stored. The user clicks on the proper files and hits the button that says "submit". The system responds by displaying the file name next to the "Upload Files" button. The user hits a button at the bottom of the screen that says "Submit".

Epic Link:	class schedule				
Sprint:					

Description

**Priority:** high priority

**Effort estimate:** Around 4-5 hours.

**Acceptance Criteria:** Need an Acceptance Criteria because we will need a code to go and search in the class schedule and display a list of all available classes.

**Requirements:** The user should be able to search for classes scheduled and see all available classes, with details as follows start date, time, instructor's name, number of units, and prerequisites.

4/19/2021Jira

**FeVER:** The user starts at the home page and should be easily found and identify the class schedule. The user clicks on the class schedule button, the system responds by jumping into the schedule page. On the schedule page, the user can choose to change the search preference by choosing the following options in the form. The schedule page should have the following text boxes for user input the text boxes with a red asterisk are required and text boxes without a red asterisk are optional. The required text box is one search bar with a caption inside it “Subject, course number, title or major” in this search bar user can put course number or title or search by subject. To help the user to narrow the search there are other text boxes that users can use to search by preferred professors, preferred times, preferred classes, or classes with completed prereqs. The user clicks on the search button and a list of classes will be shown.

Epic Link:	<a href="#">Search classes (Michael Mateo)</a>				
Sprint:					

Description

Requirement:

- The user should be able to see the total units and the total amount of fees for their classes when they click the cart tab.

FeVER:

- User clicks on the “cart” tab. After the user selects a class, the class will be added to the cart. The user will have the option to continue searching for classes or proceed for payment. The cart will display the list of classes selected by the user along with the total units for those classes. The user will have an option to delete a class from the list by having checkboxes for each class and a button to delete. The cart will display the total amount of fees for the selected classes. When paying for fees, the user will have two available methods for paying: by check and by card. Both transactions will be checked by the system if it will become successful or not.

Acceptance criteria:

- The student must have an account, which is assumingly fulfilled because they have access in the homepage. The user must be enrolled in classes in order for the cart to display the classes enrolled.

Sprint:					

Description

**Requirements:**

- The user should be able to search for a class and its course number in enrolling classes when they click “search for classes” tab.
- The user should also be able to search for professor’s last name to search for a class

**FeVER:**

- When the user clicks on “search for classes” tab in the homepage/dashboard, the system will provide 2 options for the user to search for classes: a drop-down list for subjects along with a text box for course number, and a text box for the professor’s last name. The user will pick a subject from the drop-down list; and they will have an option to enter the course number for that subject to make the search narrower. If the user chooses to search a class by looking up a professor, the system will provide a search box for the user to search a professor by their last name. After the user satisfies one of these two options, the system will display all of the classes offered for the semester. The list includes the subject, subject description, meeting time, the professor and their rating, and the units.

**Acceptance criteria:**

- The student must have an account, which is assumingly fulfilled because they have access in the homepage.

Description

**Requirements:** The user should be able to take assessment tests that will determine which entry classes they should enroll in (math, english, etc.)

**FeVER:** The user begins at the home screen. The user clicks on the button that says "Assessments". The system responds by displaying the assessment page. There are buttons labeled "Math Assessment", "Writing Assessment", and "Transcripts". The user clicks on the "Math Assessment" button, and the system responds by taking the user to the math assessment test. The user takes the test and clicks a button to finish and submit the test. The system responds by taking the user back to the assessment page and updates the math portion, displaying the test results next to the "Math Assessment" button. The user clicks on the "Writing Assessment" button, and the system responds by taking the user to the writing assessment test. The user takes the test and clicks a button to finish and submit the test. The system responds by taking the user back to the assessment page and updates the writing portion, displaying the test results next to the "Writing Assessment" button. The user could choose to click the "Transcripts" button. The system displays the user's math and writing transcripts. The system displays which course credits are counted, and which courses the user needs to take.

**Acceptance criteria:** If working properly, the user can select which test they would like to complete (math or writing). If the user selects the button "Math Assessment", they should be taken to the math assessment page. If the user selects "Writing Assessment", they should be taken to the writing assessment page. If the user has already completed the assessments, the button should be replaced with the user's score and the correct class for placement. This feature requires that the user has already applied to the school and their account has been created.

[SCG3-18] As a user, I want to send my transcripts so that I can satisfy parts of my degree. Created: 09/Apr/21 Updated: 19/Apr/21

Sprint:					

Description

**Requirements:** The user should be able to submit transcripts of any previous college courses so that they may satisfy degree requirements.

4/19/2021

Jira

**FeVER:** The user begins at the home screen. The user clicks on the button that is labeled “Upload Transcripts”. The system responds by displaying a page that provides options for submitting the user’s official transcripts. The user clicks on a button labeled “Upload Files”. The system responds by opening up the computer’s file explorer. The user selects the correct directory where their official transcripts are stored. The user clicks on the proper files and hits the button that says “submit”. The system responds by displaying the file name next to the “Upload Files” button. The user hits a button at the bottom of the screen that says “Submit”.

**Acceptance criteria:** If working properly, the user should be able to submit a file containing their transcripts. The user should be able to browse their files through the file directory, and select files with the extensions .txt, .pdf, or .jpg. This feature requires that the application and user account has already been created.

As student user, i want to input for login confidentiality so that i can log in my account (SCG3-10)

[Create Account](#)

Sprint:

Description

**Requirements:** The user should be able to confirm that the information the school has is correct before creating the account.

**FeVER:** The user begins on the (completed) page that has the drop down lists “Term applying for” and “Major category”. The user clicks the button on the bottom of the screen that says “Verify”. The system responds by updating the page to display all of the applicant information that the user has entered. From top to bottom, the system displays the user’s first and last name, date of birth, social security number, contact information, the term the user is applying for, and the major category the user has selected. There is a message at the bottom of the screen, “Is the following information correct?”, followed by two buttons labeled “Yes” and “No”. If the user selects “No”, the system takes them back to the beginning of the application page. Else if the student selects “Yes”, the system displays a confirmation message, stating “the application has been sent to the school”. The system sends a verification email to the student.

**Acceptance criteria:** If working properly, the system will display all of the information that the user has entered from the previous story. The user can confirm whether or not the information is correct. If the information is correct, the “Yes” button will display a confirmation message (eg, “the application has been sent”) and send an email to the student. If the information is incorrect (there’s a typo), the “No” button will send the user back to the beginning of the application. This feature requires that the user has already filled out the application.

Description

Acceptance Criteria: Password and username data stored

1. **Requirements:** The user should be able to change his/her password or username with email or phone number.

2. **FeVER:** The students will click in “forget password or username” , the software will respond to the student choosing a form of password recovery either they can use their email or phone number to change their password or username. The user clicks “Send Code”. The system will verify the email or phone number and send a one time code to the user. The user has to enter the code in a form of 6-8 random digits from email or phone. The user clicks “Submit Code” the system will verify the random code and lead to another text input “ new password” + “confirm password” and click “Submit password” and lead back to the login page. If you username the system just show what the username and lead back to log in page.

Create Account

Sprint:

Description

**Requirements:** The user should be able to send an application to the school, and once completed, the user will create an account.

**FeVER:** The user starts at the home screen. The user clicks a button that says "Apply to school". The system responds by displaying the application page where the user inputs their information into the following text boxes: First and last name, date of birth, social security number, contact information (phone, email, address). The user clicks on each of the text boxes and inputs their information accordingly. If any box is left empty, the system leaves a red asterisk next to the box with a note that says "required". If any of the boxes contain illegal characters, the system leaves a message highlighted in red that displays which characters are allowed. The user, after filling in each box, clicks a button at the bottom right side of the page that says "Next". The system updates the page and now displays some drop down lists that are labeled "Term applying for" and "Major category". The user clicks on each of the drop down lists, and enters the correct selection. The user then clicks a button on the bottom of the screen that says "Verify".

**Acceptance criteria:** If working properly, the user should be able to input and submit all of the required information (with legal characters). This feature can stand alone and it will lead into the next user story for verification.
